Wake Forest University School of Medicine, USA.

Description:

Infections remain the leading cause of death worldwide and as new antibiotics are developed organisms develop mechanisms of resistance. Successful treatment of skin infections relies on accurate and swift diagnosis, and visual inspection remains the most important means to that end. This book aims to provide a highly illustrated guide to the diagnosis of common bacterial, fungal, viral and tropical skin infections, as well as recognition of arthropods of medical importance. The text is divided into chapters by class of organism, and in each chapter by clinical entity. It will be of lasting value to dermatologists in practice and training, and to physicians in infectious disease, as a learning resource and a clinical reference.

Short Contents:

Introduction, 1. Bacterial Infections, 2. Viral Infections, 3. Fungal Infections, 4. Tropical Infections, 5. Arthropods and Infestations, Index.

144 pp
261 x 194 mm page size
397 colour illustrations
Hardcover edition
ISBN: 978-1-84076-107-8
Price: £60.00
Publication: 2009

Readership:

Dermatologists in practice and training. Infectious disease physicians.

Key Features:

- A handy clinical reference and guide to infectious disease of the skin.
- Covers all common bacterial, fungal and viral skin infections.
- Chapter on arthropods of medical importance.
- Contains superb colour illustrations.
