

Atlas and Textbook of Small Animal Neurology

André Jaggy

Professor of Neurology, University of Berne, Switzerland.

Richard Le Couteur,

University of California, Davis, USA.

Description:

This is a comprehensive overview of small animal neurology covering the diagnosis and treatment of all clinical problems. It contains detailed information on neurological examination procedures, neuropathology and genetic disorders. There are also individual chapters on laboratory tests, anaesthesia, radiology and electrodiagnostics, rehabilitation, pharmacology and surgery.

This book usefully lists specific neurological diseases according to their location, and will be an excellent tool for guiding professionals and students in their diagnosis and treatment.

Contents: 1. Neurological Examination of Small Animals, 2. Neuropathology, 3. Genetic Diseases and Breed Disposition, 4. Laboratory Investigations, 5. Anaesthesia, 6. Neuroradiology, 7. Electrodiagnostics, 8. Rehabilitation, 9. Neuropharmacology, 10. Neurosurgery, 11. Acupuncture, 12. Peripheral Nervous System and Musculature, 13. Spinal Cord, 14. Vestibular Apparatus, 15.
